# Inter-Community Telephone Company, LLC. Line 112 – Five-Year Service Quality Improvement Plan

As required in 47 C.F.R. § 54.202(a)(1)(ii), the following pages provide the Company's five-year service quality improvement plan that describes with specificity the proposed improvements and/or upgrades over the next five years to the applicant's network throughout the Company's service area. While the plan being presented for this Rural Local Exchange Carrier ("RLEC") is based on the best information that we have at this time, it is important to note that all of the expenditures required will be subject to review and final decision by the Company's Board of Directors at the appropriate times; and that the relevant circumstances may change. Accordingly, the five-year service quality improvement plan being presented herein may need to change substantially for reasons including, but not limited to, changes based on factors such as those listed below:

# FACTORS WHICH MAY REQUIRE FUTURE MODIFICATIONS TO THE COMPANY'S FIVE-YEAR PLAN:

The five-year plan, as detailed on the following pages, is subject to the following factors, among others:

1) Revenue Recovery: The ability to finance the capital expenditures planned for the five-year plan period, either through internally generated funds or external financing, are predicated on the expected revenue flows to be derived by these capital expenditures. If revenues would not be achieved either due to changes in regulations including, but not limited to, reductions in federal or state universal service support mechanisms or intercarrier compensation or by significant reductions in the number of services subscribed to by the Company's customers, adjustments to the proposed capital expenditures in the five-year plan would be required. For example, if the support revenues that would be derived based on the capital expenditures would be reduced due to eliminations of Universal Service Fund ("USF") mechanisms or significant changes to those USF programs, revisions to the five-year plan may be required.

In addition, if USF programs remain the same, but due to the computation of the program, USF revenues decline, adjustments to the five-year plan may be required. For example, if increases in the National Average Cost Per Loop ("NACPL"), which are very difficult to predict, substantially reduces the High Cost Loop Support ("HCLS") for the Company or if the impact of the corporate cap on the Interstate Common Line Support ("ICLS") mechanisms were to substantially reduce the Company's USF payments, then the capital expenditures in the five-year plan may need to be reduced.

2) **Permits:** It is not possible to predict the ability to obtain all necessary permits, including easements and rights-of-way, within the five-year time-frame required to complete the capital expenditures included in the Company's five-year plan. Permits can be, and often

## Line 112 – Five-Year Service Quality Improvement Plan (Cont'd)

are, delayed significantly by various governmental agencies and those delays are totally outside the control of the Company.

- 3) **Weather Issues:** It is not possible to predict the impact of the weather on the installation of the capital expenditures included in the Company's five-year plan. For example, if the ground is frozen, the timing of installing facilities can be significantly delayed and those delays are totally outside the control of the Company.
- 4) Lead Time to Obtain Materials from Vendors: It is not possible to predict when a material critical for the capital expenditures included in the Company's five-year plan may come into a shortage situation. For example, in the last couple of years, the industry experienced a shortage of fiber optic cable where there was an 18 month lead time to obtain fiber optic cable. Delays of this nature are impossible to predict and are totally outside the control of the Company.
- 5) Lead time to get Contractors to Install Facilities: Just as with the materials, the Company has experienced times when it was not able to obtain contractors to install the equipment because the Company is not large enough compared to other firms wanting the contractor to do work for them. Therefore, the Company had to wait until much later than anticipated to get the contractor to come install the facilities for them. Once again, delays of this nature are impossible to predict and are totally outside the control of the Company.
- 6) Increases in Construction Costs: Just as with any business, it is impossible to predict if certain key material or installation costs will increase significantly during the period of time included in this five-year plan. During the last few decades, the telecommunications industry has undergone periods of time where material and installation costs escalated due to circumstances beyond the control of the Company (e.g., Hurricane Katrina, etc.). Price increases of this nature are impossible to predict and are totally outside the control of the Company.

If any of these, or items similar to these, occur, the Company may need to modify the five-year plan.

#### **FIVE-YEAR PLAN OVERVIEW:**

In addition to providing voice and broadband services, the company provides custom calling features and long distance services to the customers located in its service area. The Company has developed this five-year plan in order to continue to improve service quality, coverage and/or capacity to the subscribers located in its RLEC service area.

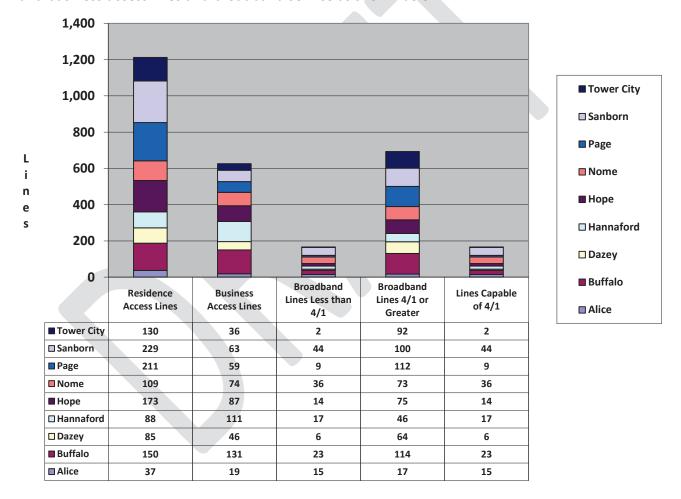

The Company provides service primarily through the use of fiber optic cable and electronics between the central offices and between the central offices and the subscriber terminal equipment (e.g., Digital Loop Carriers ("DLCs")) in the field. The last mile facilities are generally

## Line 112 – Five-Year Service Quality Improvement Plan (Cont'd)

provided over copper; however, the Company has a certain amount of fiber-to-the-premise ("FTTP") facilities, as well. It is the company's intention to continue to install fiber optic cable and electronics, wherever feasible. The company has begun the transition from the TDM-based network to an IP-network and is continually assessing the most cost-effective technology solutions to provide our customers the services they request.

#### **COMPANY SERVICE AREA INCLUDED IN FIVE-YEAR PLAN:**

The Company serves a very rural, sparsely populated portion of the United States where there are numerous challenges to serving the most rural customer locations. Within the RLEC's service territory of approximately 1,700 square miles, the company provides voice service to residential and business access lines and broadband service as shown below:

## Line 112 – Five-Year Service Quality Improvement Plan (Cont'd)

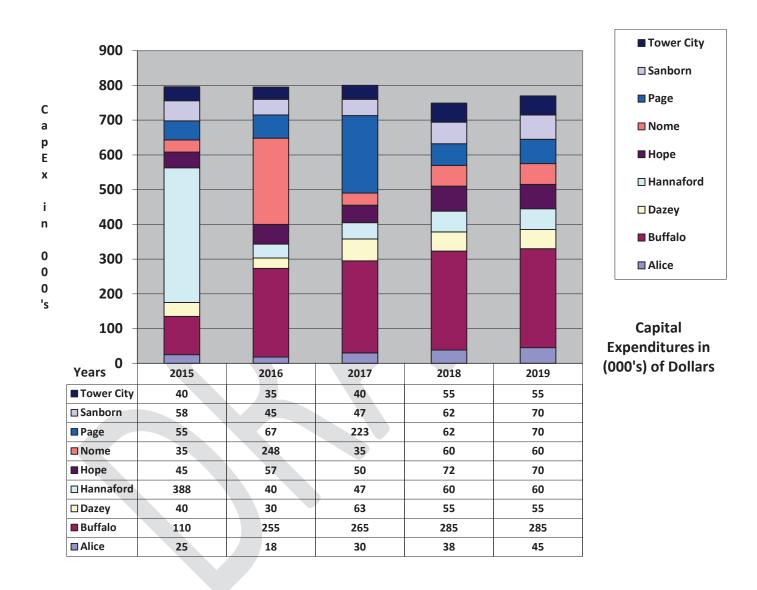

Each exchange in the company only has one wire center; therefore, the five-year plan is presented at the exchange level (which is also the wire center level). The above chart shows the breakdown of the number of access lines by exchange within the RLEC territory for residence and business and the number of broadband lines subscribed to by customers at a speed less than 4 Mbps down and 1 Mbps up and those broadband lines at or above at a speed of 4 Mbps down and 1 Mbps up. As shown on the chart above, there are still a significant number of customers that subscribe to broadband service at a speed less than 4 Mbps down and 1 Mbps up. The company is making significant efforts to market and transition customers to higher speed service so that they can have the full benefit of the information super-highway.

# Line 112 – Five-Year Service Quality Improvement Plan (Cont'd)

#### TOTAL ESTIMATED CAPITAL EXPENDITURES BY EXCHANGE:

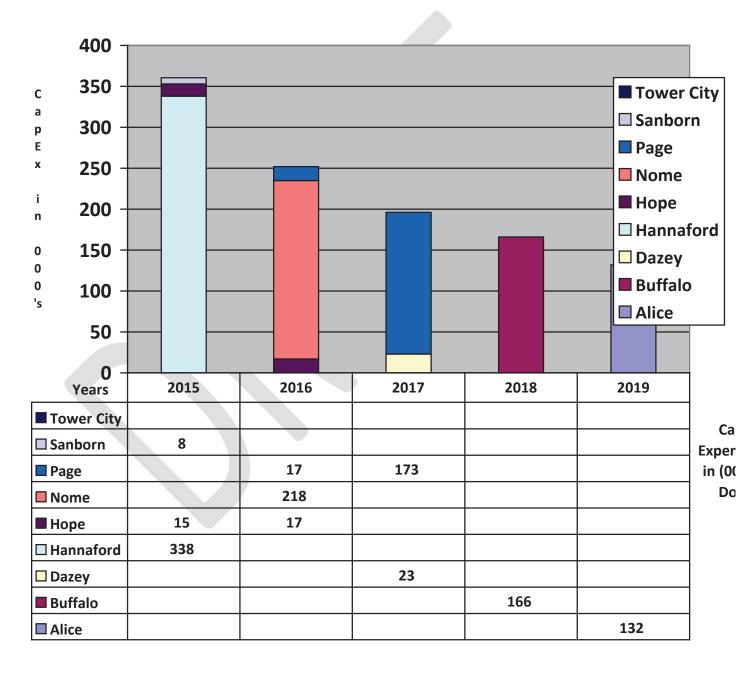

The total estimated regulated capital expenditures for the RLEC for each of the years in the fiveyear plan in each of the Company's exchanges are currently estimated to be as follows:

## Line 112 - Five-Year Service Quality Improvement Plan (Cont'd)

#### **FACILITIES TO SHORTEN LOOP LENGTH:**

The Company understands that customers continually want and need more bandwidth. Due to the extremely remote locations of some customers, the distance from the nearest electronic site to the customer location can pose a major obstacle to providing higher speeds. Shortening that portion of the loop allows the company to provide greater speed; therefore, the Company intends to install cable and wire facilities and/or circuit equipment in each of the Company's exchanges as shown below:

## Line 112 – Five-Year Service Quality Improvement Plan (Cont'd)

## **SWITCHING EQUIPMENT:**

The Company is currently upgrading switching facilities due to the transformation from TDM to the IP-based technologies. Prior to acquisition of switching equipment, the Company analyzes what would be the best technological solution since vendors go out of business, new products are released to market and upgrades may be made to existing equipment which may allow the equipment to continue to be used more cost effectively.

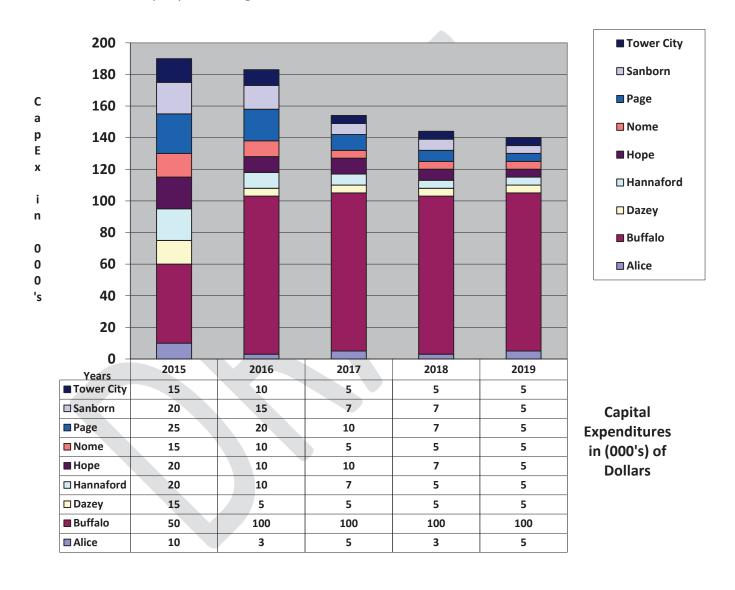

The Company is currently not considering technological upgrades to its switching equipment during the term of the five-year plan. Due to the Company's current implementation of an IP-based softswitch, it does not anticipate the need for any further switching equipment upgrades during the five-year period.

## Line 112 - Five-Year Service Quality Improvement Plan (Cont'd)

#### **INTEREXCHANGE FACILITIES:**

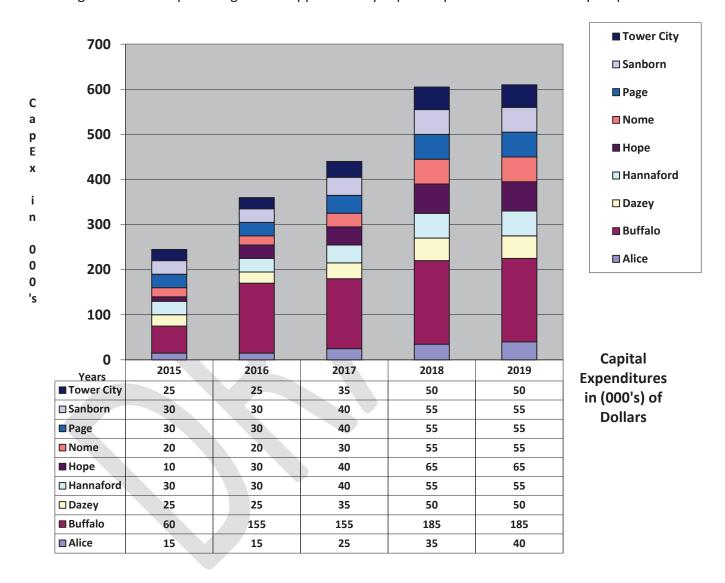

The Company's exchanges are predominately interconnected with fiber optic cable and electronics. In a few cases, due to terrain or other conditions, microwave or other technologies may be used. For enhancements and upgrades to the Company's interexchange facilities, the Company's current plan is to install additional cable and wire facilities and/or circuit equipment in each of the Company's exchanges as shown below:

# Line 112 - Five-Year Service Quality Improvement Plan (Cont'd)

#### **GENERAL SUPPORT FACILITIES:**

The Company must continually upgrade the general support facilities (i.e., computers, furniture, office equipment, vehicles, land and buildings) due to technology changes, obsolescence and personnel needs in order to provide both voice and broadband service to its customers. The following is the current plan for general support facility capital expenditures in the five-year plan:

## Line 112 – Five-Year Service Quality Improvement Plan (Cont'd)

## COMPANY POLICY TO DETERMINE IF A REQUEST FOR BROADBAND SERVICE IS REASONABLE:

Under the framework adopted by the Federal Communications Commission ("FCC") in the *USF/ICC Transformation Order*, as a rate-of-return carrier, the Company, is required to deploy broadband-capable infrastructure to a customer upon reasonable request.

The FCC expressly recognized that there are some areas of the country where it is cost prohibitive to extend broadband using terrestrial wireline technology and, that in some areas, satellite or fixed wireless technologies may be more cost-effective options to extend service.

It is the Company's policy to deploy broadband-capable infrastructure to a customer, upon reasonable request, as defined below.

#### **GENERAL POLICY:**

When evaluating a request to extend broadband service, the Company shall consider whether it would be reasonable to make the necessary upgrades in light of anticipated revenues. A reasonable request is one where the Company could cost-effectively extend a voice and broadband-capable network to that location. In determining whether a particular upgrade is cost effective, the Company shall consider not only its anticipated end-user revenues from the services to be offered over that network, both voice and retail broadband internet access, but also other sources of support, such as federal and, where available, state universal service funding projected to be available under current rules.

In considering end-user revenues, the Company shall take into account the reasonable comparability benchmark for broadband services, as appropriate. If the incremental cost of undertaking the necessary upgrades to a particular location exceed the revenues that could be expected from that upgraded line, a request would not be reasonable.

A request to upgrade an existing voice line to provide broadband service would not be reasonable if it would require new investments that would cause total high-cost support, excluding CAF ICC, to exceed \$250 per line per month in a given study area.

As the FCC determined in the *Third Order on Reconsideration,* the Company may also take into account backhaul costs or other unique circumstances that may make it cost-prohibitive to extend service to particular customers.

## Line 112 – Five-Year Service Quality Improvement Plan (Cont'd)

#### **EXTENUATING CONSIDERATIONS AND EXECUTIVE APPROVALS:**

In addition to the above stated general policy, additional factors, including, but not limited to, items such the following shall be considered prior to denying the provision of broadband service based on a request of a customer as not reasonable:

- Extremely high potential for significant other residential or business customers in the area within a reasonable amount of time.
- Anchor institution requirements.
- Possible community development potential.
- Health and public safety concerns, including, but not limited to, E-911 issues.
- Other health, economic development and/or welfare factors.
- Financing agency or Commission, either state or federal, mandates or requirements.

If it is determined that additional, extenuating circumstances are relevant and should be considered, Company executive review and approval is required for the project to be undertaken if does not meet the terms of the general policy stated above.

**FURTHER SPEED ENHANCEMENTS:** If the FCC were to revise its broadband performance obligations to require higher speeds, such as 10 Mbps downstream, new deployments would, most likely, be required to meet the new benchmark. The Company would only be required to meet that higher speed if the request for service was *reasonable*.

#### **CONCLUSION:**

The Company's five-year service quality improvement plan is designed to continue to improve and upgrade facilities in order to provide customers with high quality voice and broadband service in a cost-effective manner. This includes shortening the length of the loops, as needed, in order to provide greater bandwidth to the customer; augmenting and upgrading the interexchange facilities, as needed, to provide greater speeds and sufficient facilities for special access circuits, including, but not limited to, dedicated facilities to wireless towers; modifying switching equipment, as needed, in order to provide the services and features desired by the customer; and adding/replacing general support equipment, as needed, in order to continue to operate as a company and provide service to the end user.

**File name:** 381616nd510.pdf

## Inter-Community Telephone Co., LLC

## Line 510 - Compliance with Service Quality Standards and Consumer Protection

As required in 47 C.F.R. § 54.313(a)(5) for High-cost Recipients, the following is a detailed description of how the Company complies with Service Quality Standards and Consumer Protection Rules.

**SERVICE QUALITY STANDARDS:** The Company abides by the State Commission's requirements for service quality. All required reporting is done with the Company in full compliance of the service quality standard requirements.

#### **CONSUMER PROTECTION RULES:**

The Company developed and implemented a Customer Proprietary Network Information ("CPNI") Compliance Manual and has appointed a CPNI Compliance Officer. Annually, the Company requires all employees to certify that they have reviewed and understand the CPNI Compliance Manual and that they understand that any violation of the Company's CPNI procedures may result in disciplinary action up to and including dismissal. The Company files an annual report with the Federal Communications Commission ("FCC") certifying compliance with the FCC's CPNI rules.

The Company also developed and implemented an Identity Theft Prevention Program Manual and has appointed a Red Flag Coordinator. Annually, the Company requires all employees certify that they have reviewed and understand the Identity Theft Prevention Program Manual. Further, employees must certify that they understand that any violation of the Company's identity theft prevention procedures may result in disciplinary action up to and including dismissal.

File name: 381616nd610.pdf

# Inter-Community Telephone Co., LLC Line 610 - Functionality in Emergency Situations

As required in 47 C.F.R. § 54.313(a)(6) for all high cost recipients, which includes the Company, and as set forth in 47 C.F.R. § 54.202(a)(2), the following provides a detailed description demonstrating that the Company has the ability to remain functional in emergency situations, including a demonstration that 1) it has a reasonable amount of back-up power to ensure functionality without an external power source, 2) is able to reroute traffic around damaged facilities, and 3) is capable of managing traffic spikes resulting from emergency situations.

**OVERALL RESPONSE TO EMERGENCY SITUATIONS:** The Company has a comprehensive disaster recovery plan (also called a "continuity plan") that was developed and implemented for the Company specifically to deal with emergencies. It has detailed, specific steps that are to be taken for each type of emergency.

**POWER:** In order to function in an emergency, the Company has a combination of batteries and emergency generators. Some locations have permanent emergency generators with fuel tanks; whereas, other locations require a portable generator to be brought to the location to recharge the on-site batteries. The company owns several portable generators that technicians can take out to recharge the batteries. For example, the company's central offices have automatic stand-by generators to run the entire offices. The digital loop carrier ("DLC") sites also have battery back-up.

**REROUTING TRAFFIC AND REDUNDANCY:** The Company has established 100% redundant E-911 trunks and SS-7 routes. In addition, the network was designed with redundancy, wherever possible, especially in the backbone network. Where it is not redundant, the Company has the ability to redirect most backbone traffic. In cases where there is no redundancy, it is due to the extreme cost of a 100% redundant network. For example, the loop to the customer location is typically not redundant, especially for residential customers. This is because it would not be cost effective to build totally separate facilities for the "last mile" to the customer.

MANAGING TRAFFIC SPIKES: The Company realizes that when a catastrophe happens, everyone immediately tries to contact friends and family to make certain they are all right. The Company has designed the network to have excess capacity on its backbone network. For example, on Mother's Day, the company handles traffic without the customer receiving the "All Trunks Busy" message which demonstrates the Company's ability to handle peak traffic spikes.

# Inter-Community Telephone Co., LLC Line 1010 Voice Services Rate Comparability

As required in 47 C.F.R. § 54.313(a)(10), any recipient of high-cost support shall provide a letter certifying that the pricing of the company's voice services is no more than two standard deviations above the applicable national average urban rate for voice services, as specified in the most recent public notice issued by the Wireline Competition Bureau and Wireless Telecommunications Bureau. The following provides the Company's support for Line 1010 - Description of Voice Service Rate Comparability.

As of January 1, 2014, the Company charges the following fixed voices prices:

Flat Rate Residential Service	\$16.09
State Residential Subscriber Line Charge	0.00
State Universal Service Charge Fee	0.00
Mandatory Extended Area Service	0.00
Residential Federal Subscriber Line Charge	6.50
Total Residential Fixed Voice Charges	\$22.59

Since the total for residential fixed voice that the Company charges, as shown above, is below the \$46.96, which is two standard deviations above the applicable national average urban rate for voice services, announced by the FCC Wireline Competition Bureau in the Public Notice released on March 20, 2014 (DA 14-384), the Company hereby certifies that it is in compliance with 47 C.F.R. § 54.313(a)(10).
